Avoiding Problem Foods as You Age

Grapefruit

It may be surprising, but foods can affect how your medicine works. That's why it's always best to ask your doctor or pharmacist if you should avoid any foods. For example, if you take medicine for high blood pressure, anxiety, or insomnia, grapefruit juice may interact with your drugs. Don't miss out on the vitamin C and potassium that grapefruit holds. Instead, enjoy other citrus fruits like oranges and limes. But check the labels of other juices before you drink them. Some may contain grapefruit juice.

Raw Vegetables

If you have sensitive, decayed, or missing teeth, raw vegetables may be high on your list of foods to avoid. But don't miss out on the vitamins and fiber. Instead, try cooking vegetables until they are softer. Or use pureed vegetables -- such as carrots, pumpkins, and beets -- in soups or stews. You can also try canned vegetables. Just look for those with no added salt.

On the 4th of February, 1948, Sri Lanka got its freedom from a long period of British political rule.

This day is known as the Sri Lankan Independence Day and is celebrated widely in the entire country as an official holiday. The movement to drive away the British was led by educated middleclass men in the 20th Century.

The day is marked with flag hosting ceremony, performances and parades all over the country.

On this Sri Lankan Independence Day, we vouch for the bravery, patriotism and all those who have loved the country with all their heart and earned this freedom.

Sri Lanka is a proud country because our independence isn't a result of long battles and war, rather we are one of those countries that got it with peace.

With compassion and friendship, there is a greater unity in the country and the walk towards successful independence is hence easier. Happy Sri Lankan Independence Day.

Hypothyroidism symptoms and signs in an older person

Some people over age 60 have few, if any, symptoms of an underactive thyroid gland (hypothyroidism), while others experience the same symptoms younger people do. Still others have hypothyroidism symptoms that are not typical at all, making the diagnosis even more difficult. Any of the following signs and symptoms can indicate hypothyroidism in an older person.

Unexplained high cholesterol. High cholesterol is sometimes the only evidence of an underactive thyroid in an older person. Because this sign may stand alone, high cholesterol warrants a thyroid evaluation.

Heart failure. Reduced blood volume, weaker contractions of the heart muscle, and a slower heart rate—all caused by low thyroid hormone levels—can contribute to heart failure, when your heart can't pump out blood as effectively as it should. The ineffective pumping may cause subtle symptoms such as feeling less energetic or just walking more slowly. In more advanced stages, fluid can back up in the lungs and legs causing shortness of breath and leg swelling.

Bowel movement changes. An older person with hypothyroidism might have constipation because stool moves more slowly through the bowels.

Joint or muscle pain. Vague joint pain is a classic hypothyroidism symptom. It sometimes is the only symptom of hypothyroidism in an older person. Many people experience general muscle aches, particularly in large muscle groups like those in the legs.

Psychiatric problems. Clinical depression—a common symptom in younger people with hypothyroidism—can also affect older people with the condition. The difference is that in older people it can be the only hypothyroidism symptom. Some older adults also develop psychosis with delusional behavior or hallucinations.

Cognitive decline. Older people with a very underactive thyroid gland can sometimes be misdiagnosed as dementia. That's why doctors usually order thyroid testing in people with new cognitive decline. If you or a loved one is being evaluated for dementia, make sure that a thyroid test is part of the evaluation.

To learn more about diseases and conditions of the thyroid, read the Special Health Report, [Thyroid Disease](#) from Harvard Medical School.
